Structural Drawing

MEZCLADORA MARCA BBG REF: MA100

- 1) Before use, check that power supply corresponds to that required by the machine, and the machine must be earthed.
- 2) Run the machine without load before use. There should be proper space between the bowl and the blenders.
- 3) The blenders rotate or reverse in the bowl controlled by the switch and the stuffing is blended well.
- 4) Pour the stuffing into the bowl and place the cover then run the machine. Turn off the power after finish. Remove the pin for setting the bowl and rotate the bowl. Then the stuffing can be taken out.
- 5) There are four wheels and four feet under BX100A
- 6) Do not use the machine for dough mixing or it may be damaged.

Attention: It can not be cleaned by water directly.

This machine installed electromotor protect device, it will stop the power automatically when it overload or under reverse circs. Can be protected and let the electromotor safety, now should be shut down the power, clean out obstruction, then restart the machine after connect power.

This product has been passed the quality test of the China Testing Alliance.
